Kein Ankleben von koaguliertem Gewebe

„Bei der Koagulation des Gewebes kann es zum Verkleben des koagulierten Gewebes mit der Pinzettenspitze kommen. Dieser unerwünschte Effekt kann durch den Einsatz von NONSTICK Bipolar-Pinzetten praktisch vollständig verhindert werden. Zeitraubendes Reinigen dieser Pinzetten während der OP entfällt, was Unterbrechungen beim Arbeiten erheblich reduziert. Pinzettenspitzen aus Material mit besonders guten thermischen Eigenschaften ermöglichen diese Verbesserung. Der “NONSTICK” Effekt bleibt dauerhaft erhalten und wird auch durch häufiges Sterilisieren nicht gemindert.“

No adhesion of tissue during coagulation

During coagulation tissue may stick to the forceps-tip. This adverse effect can be avoided almost completely by using NONSTICK Bipolar Forceps. Forceps-tips of material with excellent thermal properties prevent tissue from sticking to the instrument. Cleaning of the instrument during operation is no longer required thus reducing the interruptions during the procedure. The NONSTICK-effect is permanent, even if subject to frequent sterilization.

Aucune adhésion du tissu coagulé

Pendant la coagulation du tissu il se peut que le tissu coagulé adhère à la pointe de la pince. L'utilisation des pinces NONSTICK permet de supprimer cet effet indésirable quasi complètement. Le nettoyage difficile et pénible des pinces pendant l'opération n'est plus nécessaire, ce qui réduit considérablement les interruptions de travail. Tout cela est possible, car les pointes des pinces sont faites d'une manière présentant des caractéristiques thermiques excellentes. L'effet NONSTICK (non-adhésif) est assuré en permanence et n'est pas ou plus réduit par une stérilisation fréquente.

Sin adhesión del tejido coagulado

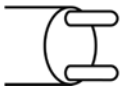

Al coagular un tejido puede que el tejido coagulado quede adherido a la punta de las pinzas. Este efecto no deseado puede evitarse prácticamente por completo usando las pinzas bipolares NONSTICK. La limpieza molesta de las pinzas durante la operación que además exige mucho tiempo queda suprimida lo que reduce considerablemente las interrupciones en el trabajo. Esto se consigue aplicando un material con propiedades térmicas especialmente buenas a las puntas de las pinzas. El efecto NONSTICK (antiadhesivo) es duradero y no se verá mermado por esterilizaciones frecuentes.

Nessuna adesione del tessuto coagulato

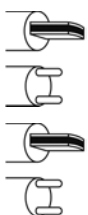

Con la coagulazione del tessuto può darsi che il tessuto coagulato si attacchi alla punta della pinza. L'uso delle pinze bipolari NONSTICK permette di impedire questo effetto indesiderato quasi completamente. La pulizia faticosa delle pinze che richiede molto tempo non è più necessaria durante l'operazione, il che riduce notevolmente le interruzioni di lavoro. Ciò è possibile utilizzando un materiale con caratteristiche termiche eccellenti per le punte delle pinze. L'effetto NONSTICK (non adesivo) si mantiene permanentemente e non viene neanche ridotto da una sterilizzazione frequente.
